

Introductory programming – Part 2

Exercise: Arguments

Hint: For these tasks, you will need string functions. Type “help string function” to gain an overview.

Task 3

Write a program which counts the number of arguments used and displays them one by one (below each other)

Example:

```
. task3 sdf klj 145 lkjgn sdlkfj "sldkjf "  
Word count is 6  
sdf  
klj  
145  
lkjgn  
sdlkfj  
sldkjf
```

Task 4

Write a program which counts the number of characters typed in (both with and without blank spaces)

Example:

```
. task4 sdf klj 145 lkjgn sdlkfj sldkjf  
The number of characters including blank spaces is 32  
The number of characters excluding blank spaces is 26
```
